

Heavy Rain Caution

Water treatment facilities add extra chlorine and chloramines to tap water immediately after heavy rain events. So, be sure to **double the amount** of dechlorinator when adding tap water to your pond!

After a heavy rain Fire Ants are on the move. They tend to nest in In-Line Pumps (pumps located out of the pond), causing the pump to over-heat and burn out.

Beneficial Nematodes are a safe and effective fire ant control, even around the pond!

Your fish will love you for it!
